Updated PFAS Solution/Mixtures for U.S. EPA Methods

Multiple U.S. EPA methods commonly used for the analysis of PFAS (e.g. 533, 537.1, and 8327) recommend quantitative standards containing mixtures of branched and linear isomers due to observed differences in ion response. To aid in the analysis of these compounds, **Wellington** has updated our current selection of mixed PFAS reference standards to include **EPA-533APDS**, **EPA-537APDS**, and **EPA-8327STK**. These solution/mixtures contain previously unavailable quantitative isomeric mixtures of PFOA and PFNA, as well as FOSA for **EPA-8327STK**, but are otherwise identical to our existing **EPA-533PAR**, **EPA-537PDS-R1**, and **PFAC-24PAR** products, respectively.
